

Leichhardt Poll

Prepared for Australian Marine Conservation Society
June 2016

1

Methodology

Methodology

This study was conducted amongst voters in the electorate of Leichhardt between Tuesday 31 May and Wednesday 1 June, 2016.

The sample is 400 voters, distributed throughout all the postcode areas within Leichhardt.

Quotas based on age, gender and postcode were applied to ensure that the sample composition reflects the population.

Interviews were conducted using CATI (computer assisted telephone interviewing) with telephone numbers randomly selected from Sample Pages. All interviewers were personally trained and briefed on the requirements of the study.

Following the completion of interviewing, the data was weighted by postcode, age and gender to reflect the latest ABS population estimates.

Detailed Tabular Findings

Tables

The tables of findings are set out such that they include the following details:

Weight Sample (00s):

The number of completed interviews has been weighted to reflect the latest ABS population estimates. These estimates are shown in hundreds (00's). The percentages in the table are based on these weighted figures.

Weights:

This indicates that in order to reflect the latest ABS population estimates the data has been weighted by postcode, age and gender.

Filters (where applicable):

If the table is based on a subset of respondents then this will be titled as a Filter and accompanied by a description of the sample upon which the table is based.

Respondents:

These figures show the actual sample size, indicating the total number of respondents who were asked the relevant question.
